

The English-language **INTERCERAM** – International Ceramic Review is a comprehensive source on science and technology in the areas of the ceramics and related technologies. Covering fine ceramics, heavy clay & advanced ceramics, composites, carbon & graphite, tiles & bricks, stoneware pipes, refractories, glass & glass ceramics, coatings, powder metallurgy, raw materials, and all kinds of industrial production & application.

INTERCERAM is now in the 65th year of publication and addresses the core topics:

- Raw Materials
- Whitewares
- High-Performance Ceramics
- Refractories
- Building Materials
- Powder Metallurgy
- Tile & Brick
- Glass

In addition, each issue features special-focus topics to inform the readers on cutting-edge technologies, such as new ceramic materials and applications, energy & material efficiency, process intensification, nanotechnology, bioceramics, functional and structural ceramics. Fully international in scope and coverage, the contents are compiled under the supervision of a renowned global editorial committee.

INTERCERAM delivers market information, conference and trade fair reports, company and new product profiles. It comes complete with a comprehensive international “Buyers`Guide” of the ceramic industry.

INTERCERAM is the premier, valuable and reliable source for researchers, industry experts, technicians, as well as for manufacturers, suppliers, and those involved in ceramics-related research, development and application.

Print run: 5,000 copies
Distribution: worldwide

REFRACTORIES MANUAL – published once a year – is the special edition of **INTERCERAM** for the entire field of refractories. Amongst other subjects, it reports on meetings of experts in the sector and on special refractories and their application. It examines the current status of the refractories industry in selected countries.

Target group: Experts in the refractories industry worldwide and specialists from various industries using refractory materials and technologies.

Publishing-date: September 2016

Print run: 5,000 copies
Distribution: worldwide

KERAMISCHE ZEITSCHRIFT is a German-language technical-scientific journal. It covers the complete field of ceramic and related technologies: sanitaryware, tableware, decor ceramics, heavy clay & building materials (bricks and roof tiles), floor tiles, advanced ceramics, structural & functional ceramics, powder metallurgy, refractory materials, glass and ceramic composites – from raw materials production & preparation (drying, firing, grinding, mixing, granulating, agglomeration, etc.) via shaping and coating through to characterization, finishing, application and recycling.

KERAMISCHE ZEITSCHRIFT is now in the 68th year of publication and provides professional coverage of significant trends and developments in the ceramics and related industries. It is a comprehensive source of high-quality presentations on technology, manufacturing and applications. The technical content is supplemented by market, company and community news, as well as reports on trade fairs and conferences. Each issue also includes a comprehensive international "Buyers`Guide".

The readers are experts and key-decision-makers in research and development, manufacturing, applications, and in the trade and supply industry. Advertisers benefit from the strong brand identify due to the long tradition of the journal. Your advertisements reach the decision-makers across the entire ceramics and ceramics-related industries.

Print run: 5,000 copies

Distribution: primarily in Germany, German-speaking countries, and across Eastern Europe
